// profile

Full stack, focused on AI agents in production. At WorkFactory I designed and built the AI agent for a hotel management SaaS, from the runtime and its tools to the inbox where the team reviews what it proposes. Before that, at C-Link in London, I worked on LLM pipelines, async workers and production observability.

// experience

Full-Stack & AI Engineer · WorkFactory current Jun 2026 – Present

Hotel & vacation rental management SaaS

- › Designed and built the AI agent from scratch: Python, pydantic-ai, FastAPI, state in Postgres and Langfuse tracing.
- › The agent only states facts a tool has returned; if something doesn't match, it fails closed and nothing is sent.
- › End-to-end review mode: the AI drafts a reply or action, and a person approves, edits or discards it.
- › Tools filtered by role and picked by semantic similarity, with idempotent actions running through a state machine.
- › Read-only SQL for the agent: a parser that only allows a single SELECT, over per-organization views.
- › Angular inbox (WhatsApp, email and voice grouped by booking) and a dashboard voice mode in Go over WebRTC.

Python FastAPI pydantic-ai TypeScript Node.js Angular Go PostgreSQL Redis WebRTC Langfuse

Full Stack Developer · C-Link erasmus Jan 2026 – May 2026

London, UK · AI startup for construction tenders

- › Built the Bills of Quantities analysis module end to end: schema, private REST API, Celery pipeline and tests.
- › LLM cost and token-usage accounting per analysis type.
- › New Relic APM in production (distributed traces, metrics and alerts), alongside Sentry for errors.
- › Fixed a race condition in Celery workers with late acknowledgement and refactored document ingestion.

Web Developer · Astican placement 2025

Internal applications: new features on the existing stack and less technical debt in legacy modules.

// projects

lightq-node npm

Zero-dependency in-memory job queue: concurrency, priorities, retries with backoff and cancellation.

[Node.js](#) · [TypeScript](#)

envshare

Secure sharing of environment variables across teams: encryption, per-secret TTL and single-use access.

[Next.js](#) · [TypeScript](#) · [Redis](#)

cron-scheduler-ts npm

Zero-dependency cron scheduler with pluggable persistence, missed-job detection and no drift.

[Node.js](#) · [TypeScript](#)

EzPass

Real-time P2P file transfer between mobile and desktop, with no sign-up and nothing to install.

[Node.js](#) · [Socket.IO](#)

// stack

backend	Python, FastAPI, Node.js, TypeScript, Express, Go, Celery
frontend	Angular, React, Next.js, Tailwind CSS
data	PostgreSQL, pgvector, Redis, MySQL, MongoDB
ai	LLM agents, pydantic-ai, semantic search, OpenRouter, Claude API, Langfuse
infra	Docker, Linux, GitHub Actions, Vercel, OpenTelemetry, New Relic, Sentry

// education

Higher National Diploma in Web Application Development
IES El Rincón · Las Palmas de Gran Canaria · 2023 – 2026
